

# Purpose-built threat protection for campuses, faculty and students

Education is one of the core markets Central Command® serves. Not a single other security vendor has the dedication and specific features and options we do to protect educational institutions from Internet threats. Each and everyday we work with technology coordinators, network administrations and technical support staff to help them defend their networks from malicious programs. Vexira® is the preferred choice among educators because we have cost effective and robust solutions for the exact problems you encounter everyday. We protect millions of students, faculty and staff across the United States and Canada.

Educational networks have the highest threat from malicious attack with the least amount of available resources and budgets. We have recognized this and have special pricing, configurations and options for qualified educational institutions. Open, mobile and online education environments create unique security challenges and the threat of becoming infected by viruses, spyware and Internet threats can spread far beyond the schools network. Vexira safeguards open, mobile and online education environments with complete endpoint threat protection that far exceeds “consumer grade” products. Our sole focus is defending entire networks from client to server from threats.

“We chose Vexira initially because of the enormous cost savings offered by the Safe@School program. Once we evaluated however, we realized that it is truly an effective antivirus/antispyware solution. The installation and integration into our network went well and the level of tech support when needed, was prompt and effective. I have great confidence that our environment is protected and free from viruses and spyware,” **Bret Simpson, Director of Technology, Bonham ISD, Texas**

“Vexira from Central Command is aggressively protecting our desktops and servers from viruses, spyware and other Internet threats. We are confident we made the right choice to switch to Vexira. It is a pleasure working with their US-based technical support who is very knowledgeable about the Vexira products and the unique challenges faced within school districts,” **Vince Pastre, Computer Technician, Buckeye Local School District**
