

Vexira Central Management Solution

The Vexira Antivirus Central Management Solution (Vexira CMS) is an **easy to use yet powerful and comprehensive central management application for Vexira Antivirus** within Windows Active Directory. The Vexira CMS's flexible structure allows administrators and network engineers to install, configure and control all Vexira Antivirus end-points from a single server. The Vexira CMS supports multilevel domains and management environments and several physical sites within an organization can be managed from one location.

- ✓ Full deployment and management
- ✓ Complete configuration and control
- ✓ Granular policy settings per group
- ✓ Works with Windows Active Directory
- ✓ Does not require dedicated server

Complete Management of Vexira Antivirus End-Points and Tiers

Total management of Vexira Antivirus Windows solutions - desktops, laptops, workstations, servers and multi-tiered Vexira Central Management Solutions.

Automatic Malware, Spyware and Virus

Seamless automatic updating and upgrading - all program updates and malware, spyware and virus definition updates are downloaded and distributed throughout the network from the Vexira Central Management Solution within minutes.

Vexira Antivirus End-Point Configuration Management

Definable groups of computers can be added and managed with customized installations, settings and configurations.

Easy Operation

Vexira Antivirus has an intuitive user interface that allows the malware, spyware and virus protection options to be configured to fit the unique needs of an individual or organization. Included is a simple, well explained, help system with direct links to various area's of Central Command's website in case any further information or instructions are needed.

Microsoft® Management Console (MMC) Snap-in Control Console

Incorporates the industry standard configuration and control application interface for the Microsoft Management Console.

License Monitoring and Management

Enables the ability to easily control, view, and monitor Vexira Antivirus licenses within a network

Mission Critical Architecture

The Vexira Central Management Solution is built for organizations where malware, spyware and virus protection and containment is of critical importance to the operation.

Policy Enforcement

Within Vexira Central Management Solution is the ability to lock down the configuration, preventing tampering or modification to the preset malware, spyware and virus protection profile.

Mobile User Protection

Vexira Central Management Solution can be configured to allow mobile user to obtain the necessary malware, spyware and virus protection updates directly from Central Command's core update server farm when not connected to the organizations network.

No Imaging Required

Vexira Antivirus end-points do not need to be pre-installed within computer images. Once a computer authenticates within Windows Active Directory a default Vexira Antivirus installation can be applied reducing the need to create pre-configured and outdated product images. Once recognized by the Vexira Antivirus Central Management Solution and Vexira Antivirus is installed on to the end-point the Vexira Antivirus protected computer can be moved to another policy group for continued automatic configuration.

Automatic LDAP Group and Policy Assignment

Vexira Central Management Solution supports LDAP to automatically assign particular computers to specific managed groups
