THE HOME SOLUTION

Home users can choose from 2 key security solutions: avast! Free Antivirus and the complete security package avast! Internet Security. Expert users and computer enthusiasts who prefer to tailor their own security can opt for the paid version, avast! Pro Antivirus. It is important to note that avast! Free Antivirus is limited to home, non-commercial use only.

avast! Free Antivirus 5.0

has the same malware detection capability as both premium versions and is not in any way a stripped-down or impaired version. It is the best solution for all users who use the Internet for basic e-mailing, chatting or web browsing. Since its introduction in 2004, avast! Free Antivirus has become probably the world's most popular free protection. The growing pool of users – now over 100 million – give the software consistently high approval ratings.

avast! Internet Security 5.0

avast! Internet Security provides comprehensive security if you shop or bank on-line. It provides protection against threats from infected web sites and the growing risk of identity theft. As the premium avast! product, it contains an intelligent firewall and a comprehensive anti-spam/ phishing module in addition to the antivirus, anti-spyware, anti-rootkit, script-blocker and other real-time shields. Single licenses for avast! Internet Security can be purchased for up to 3 computers.

avast! Pro Antivirus 5.0

avast! Pro Antivirus is primarily designed for small businesses and computer specialists who want the ability to customize their security protection alongside their own firewall and anti-spam filter. avast! Pro Antivirus includes sandbox virtualization and protection against both remotely and locally executed scripts. Licenses for avast! Pro Antivirus can be purchased for 1 or 3 computers.

Different avast! product features	avast! Free Antivirus	avast! Pro Antivirus	avast! Internet Security
High performance antivirus engine	✓	✓	✓
Anti-rootkit protection	✓	✓	✓
Anti-spyware protection	✓	✓	✓
Script shield	✗	✓	✓
Sandbox	✗	✓	✓
Command line scanner	✗	✓	✓
Anti-spam filter	✗	✗	✓
Built-in firewall	✗	✗	✓

SOHO and Small Business without central administration

Small business users and SOHO offices can choose avast! Pro Antivirus 5.0 or the complete protection of avast! Internet Security 5.0. Both products are available in packs of 5 and 10 licenses. As the networks are usually small and are not usually maintained by a dedicated network administrator, both solutions are offered without central administration. Small Business Solutions – including central administration

For networks comprising more than 10 workstations, or server-based networks, avast! provides a complete “suite” solution combining protection of the end user workstations, mail or file servers, with a central administration console which enables the entire network to be managed from one central location.

Small Business Solutions including central administration

For networks comprising more than 10 workstations, or server-based networks, avast! provides a complete "suite" solution combining protection of the end user workstations, mail or file servers, with a central administration console which enables the entire network to be managed from one central location.

avast! 4.8 Standard Suite

avast! Standard Suite is a package of products that provides virus protection for Windows-based servers and workstations. The Standard Suite contains the following components:

- avast! Distributed Network Manager (ADNM) – a powerful tool designed to help network administrators manage other avast! antivirus products installed on the network
- avast! Professional Edition (or, avast! NetClient Edition for use with ADNM) for the protection of workstations
- avast! Server Edition (or, avast! NetServer Edition for use with ADNM) for the protection of servers

Network Solutions

Organizations that prefer a more tailored security solution can choose from the avast! range of network solutions. For more information, please contact one of our avast! business partners located in many countries all around the world.

avast! 4.8 Server Edition

avast! 4 Server Edition offers protection against virus infections on your servers. It provides both primary protection of file servers and, via optional plug-ins, protection for various server sub-systems such as electronic mail or a firewall/proxy. The following plug-ins (editions) are available:

- MS Exchange Server
- MS Proxy/ISA Server
- SMTP Server
- MS Sharepoint Server (including Office Sharepoint Server 2007)
- Lotus Domino

avast! Small Business Server Edition

avast! 4.8 Small Business Server Edition is a special version of avast! Antivirus Server Edition, designed exclusively for Microsoft Small Business Servers. avast! Small Business Server Edition comes in two versions – the Standard and the Premium versions.

The Standard version contains the following components:

- avast! Server Edition, i.e. the antivirus kernel + file system protection

- avast! Exchange Server plugin, to protect all traffic in the Exchange Server environment
- avast! Sharepoint Server plugin, to protect Microsoft Sharepoint Server

The Premium version contains the following components:

- avast! Server Edition, i.e. the antivirus kernel + file system protection
- avast! Exchange Server plugin, to protect all traffic in the Exchange Server environment
- avast! Sharepoint Server plugin, to protect Microsoft Sharepoint Server
- avast! MS Proxy/ISA Server plugin, to protect the MS ISA Server

avast! 4.8 BART CD - bootable antivirus and recovery CD

The avast! Bootable Antivirus & Recovery Tool (BART CD) is a bootable CD, giving users the capability to detect and remove virus infections on a computer. All this can be done fast and reliably, without the risk of spreading the infection any further. The BART CD can also be used for additional tasks and contains tools for editing registry files and checking and fixing disk errors.

avast! 4.8 Antivirus for Linux/Unix Servers

avast! for Linux/Unix Servers is an antivirus solution for the increasingly popular Linux and BSD environments. With its robust design and built-in mail scanning support, it is primarily intended for Linux (or BSD) based servers. Thanks to its flexible daemon architecture, avast! for Linux/Unix Servers can be used for both file system and network traffic scanning, such as real-time mail monitoring (SMTP).
