

modusMail™

Vircom's modusMail™ is a powerful email server that is the product of 14 years of industry experience from a company that focuses exclusively on email security.

It offers unparalleled value by providing reliable mail server capabilities, while incorporating Vircom's proprietary content-filtering technology into a single solution.

Robust and powerful email server

modusMail™ is a full-featured mail server offering full POP3, SMTP, IMAP4 and HTTP support. Users can send and receive emails using any standards-based client (Microsoft® Outlook®, etc) or access their email via Vircom's WebMail, which is available in eight languages. modusMail™ supports multiple domains (depending on hardware capacity) and includes an integrated list server.

Authentication can be performed against various sources such as ODBC databases, Active Directory, LDAP and Radius. Additionally, modusMail™ offers easy integration with most billing packages such as Logisense, Engage IP, RODOPI, OptiGold, ISP-Power, Platypus and Emerald, to name a few.

A performance-driven architecture makes modusMail™ one of the industry's most efficient email servers, able to deftly handle extra traffic at peak times (including during spam floods) and minimize hardware requirements.

Proprietary email security

modusMail™ relies on the flexible multi-layer architecture of Vircom's modus™ technology to intelligently and efficiently filter all inbound and outbound traffic against unwanted email, while keeping CPU and memory usage down to a minimum.

This scalable architecture offers complete email protection that can be easily managed and frequently updated.

This integrated email security solution includes:

- Perimeter defense, protecting your email infrastructure against numerous threats, including spoofing, open relay, directory harvesting and denial of service attacks.
- Vircom's proprietary Sender Reputation System (SRS).

Highlights

- | Easy to install and operate
- | High performance and reliability
- | Integration with billing packages
- | Highly granular features with specific permissions and settings for users and domains
- | Backed by Vircom's proprietary and centrally-managed email filtering technology, providing:
 - Complete email protection
 - Inbound and outbound filtering and monitoring
 - No spam training
 - Powerful scripting engine for restriction-free policy management
- | Multi-level administration

- Multi-vendor anti-virus layer (Norman® Data Defense and/or McAfee®) that includes the award-winning SandBOX proactive anti-virus technology to insure zero-day defense.
- Proprietary spam filtering engine that combines multiple predictive and deterministic technologies, and that can be constantly and automatically updated to consistently offer 98.6% catch rate with minimal false positives (<0,01%).
- Anti-phishing defense using specific protocol and content filtering mechanisms.
- Full featured scripting engine for restriction-free policy management.

Multi-level administration

Easy to use and administer, modusMail™ guarantees your peace of mind by ensuring that your mail system is fully secure and functional with minimal maintenance.

System managers can monitor their modusMail™ using a real-time dashboard display, SNMP, and Windows® performance monitors.

At a glance, they can determine the system's complete operational status, view real-time usage statistics, or audit email messages and see recent transaction history.

In addition, modusMail™ offers the greatest flexibility in the industry, allowing you to differentiate numerous settings at both the user and domain levels. System administrators can delegate domain and user settings or force system-wide settings to avoid configuration issues:

- modusMail™ features customizable WebMail with full user control over delegated mail and filtering settings.
- modusMail™ also delivers regular quarantine reports which offer an unrivalled interface. Users can quickly review and release blocked messages, report false positives, add senders to their trusted list or schedule their quarantine report delivery for any given time (even several times a day if desired). There is no need for them to access the Web or call your help desk.
- Through a convenient WebAdmin interface, domain administrators can define their own email environment, manage mailbox accounts and mailing lists, adapt quotas, etc. The same interface allows them to specify user or domain-wide security settings, including anti-spam and language filtering settings, trusted and blocked lists, attachment blocking rules and much more.

From the email experts

Making sure that email remains a strategic communication tool for your business is our prime mission.

modusMail™ allows us to fully apply our expertise to your email operations by providing peace of mind over and above what you have already come to expect from Vircom.

Leveraging over 10 years of email and Internet experience, Vircom's team of highly-trained, knowledgeable and experienced experts are at the heart of Vircom's modusMail™ technology.
